

BRAC UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 3
Duration: 25 minutes

Semester: Summer 2025
Full Marks: 20

CSE 340: Computer Architecture

Name:	ID:	Section:
-------	-----	----------

1.	a) Study the given RISC-V Datapath thoroughly. Assume that initially PC=3FAh, x1 = 103h, x2 = EAAh, x3 = CF4h, x4=999h. Determine the values of A, B, C, D, E in hex for the instructions executed sequentially. If the value does not matter, write it as X (don't care). <table><tr><td></td><td></td><td>A</td><td>B</td><td>C</td><td>D</td><td>E</td></tr><tr><td>i</td><td>SUB X2, X3, X4</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>ii</td><td>sd x2,0(X0)</td><td></td><td></td><td></td><td></td><td></td></tr></table>			A	B	C	D	E	i	SUB X2, X3, X4						ii	sd x2,0(X0)						5
		A	B	C	D	E																	
i	SUB X2, X3, X4																						
ii	sd x2,0(X0)																						
	b) Determine the values of the following control bits when executing the instruction "And X21, X22, X23" in the provided single-cycle datapath. <table><tr><td>Memread =</td><td>Branch =</td><td>ALUSrc =</td><td>RegWrite =</td><td>MemToReg =</td></tr></table>	Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =	5																
Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =																			
2.	The following RISC-V instructions are running on a pipelined datapath. Answer the following questions based on this. add X1, X2, X7 sub X2, X1, X5 ld X2, 16(X5) sd X2, 16(X1) sll X5, X6, X7 ld X2, 16(X5) add X2, X1, X7 a) Determine the number of hazards present in the code.[1] Answer: b) How many clock cycles are needed to run the instruction set? [1] Answer: Instruction Fetch takes 15ps, Register read/write takes 15ps, ALU operation takes 30 ps, Memory access takes 15ps. c) Find the clock period. [1] Answer:																						

d) Total time to run the instructions. [1]

Answer:

e) Solve the data hazards using only stalling. [5]

Answer:

f) After resolving the hazards, by how much did the execution time change?[1]

Answer:

Brac UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 3
Duration: 25 minutes

CSE 340: Computer Architecture

Name:	ID:	Section:
-------	-----	----------

1.	a) Study the given RISC-V Datapath thoroughly. Assume that initially PC=FA3h, x1 = 183h, x2 = E0Ah, x3 = CF3h, x4=991h. Determine the values of A, B, C, D, E in hex for the instructions executed sequentially. If the value does not matter, write it as X (don't care) <table><tr><td></td><td></td><td>A</td><td>B</td><td>C</td><td>D</td><td>E</td></tr><tr><td>i</td><td>ADD X2, X3, X4</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>ii</td><td>AND X2, X1, X4</td><td></td><td></td><td></td><td></td><td></td></tr></table>			A	B	C	D	E	i	ADD X2, X3, X4						ii	AND X2, X1, X4						5
		A	B	C	D	E																	
i	ADD X2, X3, X4																						
ii	AND X2, X1, X4																						
	b) Determine the values of the following control bits when executing the instruction "BEQ X1, X6, FUNC" in the provided single-cycle datapath. <table><tr><td>Memread =</td><td>Branch =</td><td>ALUSrc =</td><td>RegWrite =</td><td>MemToReg =</td></tr></table>	Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =	5																
Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =																			
2.	The following RISC-V instructions are running on a pipelined datapath. Answer the following questions based on this. sub X11, X21, X22 and X21, X11, X14 lw X21, 16(X14) sw X21, 16(X11) srli X14, X6, 22 ld X21, 16(X14) addi X21, X11, 22 a) Determine the number of hazards present in the code.[1] Answer: b) How many clock cycles are needed to run the instruction set? [1] Answer: Instruction Fetch takes 25ps, Register read/write takes 20ps, ALU operation takes 40 ps, Memory access takes 25ps. c) Find the clock period. [1] Answer:																						

d) Total time to run the instructions. [1]

Answer:

e) Solve the data hazards using only stalling. [5]

Answer:

f) After resolving the hazards, by how much did the execution time change?[1]

CSE 340: Computer Architecture

Name:	ID:	Section:
-------	-----	----------

1.	a) Study the given RISC-V Datapath thoroughly. Assume that initially PC=63Ah, x1 = 400h, x2 = ABCh, x3 = 0F4h, x4=444h. Determine the values of A, B, C, D, E in hex for the instructions executed sequentially. If the value does not matter, write it as X (don't care) <table><tr><td></td><td></td><td>A</td><td>B</td><td>C</td><td>D</td><td>E</td></tr><tr><td>i</td><td>ADD X2, X3, X4</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>ii</td><td>SLLI X3, X2, 4</td><td></td><td></td><td></td><td></td><td></td></tr></table>			A	B	C	D	E	i	ADD X2, X3, X4						ii	SLLI X3, X2, 4						5
		A	B	C	D	E																	
i	ADD X2, X3, X4																						
ii	SLLI X3, X2, 4																						
	b) Determine the values of the following control bits when executing the instruction "LD X9, 64(X10)" in the provided single-cycle datapath. <table><tr><td>Memread =</td><td>Branch =</td><td>ALUSrc =</td><td>RegWrite =</td><td>MemToReg =</td></tr></table>	Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =	5																
Memread =	Branch =	ALUSrc =	RegWrite =	MemToReg =																			
2.	The following RISC-V instructions are running on a pipelined datapath. Answer the following questions based on this. add X4, X5, X10 sub X5, X4, X8 lh X5, 64(X8) sh X5, 32(X4) sll X8, X9, X10 ld X5, 16(X8) add X5, X4, X10 a) Determine the number of hazards present in the code.[1] Answer: b) How many clock cycles are needed to run the instruction set? [1] Answer: Instruction Fetch takes 35ps, Register read/write takes 25ps, ALU operation takes 50 ps, Memory access takes 35ps. c) Find the clock period. [1] Answer:																						

d) Total time to run the instructions. [1]

Answer:

e) Solve the data hazards using only stalling. [5]

Answer:

f) After resolving the hazards, by how much did the execution time change?[1]
